Caring for a Wounded Brain

James Baraz       Rick Mendius       Rick Hanson
Common - and Fertile - Ground

Psychology

Neuroscience

Buddhism
Heartwood

This spiritual life does not have gain, honor, and renown for its benefit, or the attainment of moral discipline for its benefit, or the attainment of concentration for its benefit, or knowledge and vision for its benefit.

But it is this unshakable liberation of mind that is the goal of this spiritual life, its heartwood, and its end.
Plan for the Morning

- Laying the Foundation
- Celebrating this Amazing Life
- Your Wonderful Brain
- The Biology of Suffering
- Freedom from “the Second Dart”
- Stories of Wounding, Refuge, and Letting
Plan for the Afternoon

- Grief, Compassion, and Lovingkindness
- How Practices Can Help Your Brain
- Loving Midwifery of a New Self
- The Long Road Ahead
- Honoring the Community of Caregivers
- Buddhist Practice with a Wounded Brain
Exploring general ways to practice with challenges, not treat specific ones

Please do not change your treatment without discussing it with your professional providers.

On the frontiers of science; “see for yourself”

Take care of yourself; adapt this to your own needs and interests.
When the facts change, I change my mind.

What do you do, sir?

John Maynard Keynes
Perspectives

- Exploring general ways to practice with challenges, not treat specific ones
- Please do not change your treatment without discussing it with your professional providers.
- On the frontiers of science; “see for yourself”
- Take care of yourself; adapt this to your own needs and interests.
The root of Buddhism is compassion,

and the root of compassion is compassion for one.

Pema Chodren
Activating the Parasympathetic

- Full breaths, especially exhalation
- Deep relaxation
- Balancing heart-rate variability; HeartMath
- Mindfulness of the body
- Yawning
- Meditation
- Fiddling with the lips
Your Wonderful Brain

- Complexity
- Speed
- Activity
- Evolution
- Mind
- Mind/Brain Integration
- Natural State of the Brain
Complexity

- 3 pounds, 1.1 trillion cells, 100 billion neurons

- Each neuron connecting to about 1000 other neurons... Creating a network of about one hundred trillion synapses

- Number of possible states: 1 followed by a million zeros

- Circular processes:
  - Self-observation and self-regulation
  - Dynamic, unpredictable, “chaotic” behavior
One Simple Neuron
Speed

- Neurons fire 5 - 50 times a second.
- Millions, even billions, pulse in rhythmic harmony with each other many times a second, creating electrical currents detected by EEGs.
- During the sound of a clap, billions of synapses activated in your brain.
### Activity

- In deep sleep or even a coma, the brain is always “on,” keeping us alive and ready for action.

- The brain - about 2% of body weight - consumes about 20% of the glucose and oxygen circulating in your blood.
Evolutionary History
Evolution

To build your brain, it has taken:
- 3.5 billion years of life on this planet
- 650 million years of multi-celled animals
- 80 million years of mammals
- 10 million years of ape-like ancestors
- 2.7 million years of stone tool-using relatives
- 100,000+ years of our own species, *homo sapiens*

The driving forces of brain evolution have been:
- Pair-bonding and raising young together
- Cooperation in large primate social groups (20 - 30
Mind

- The mind is the reason for the brain.
- “Mind” = flows of information within the brain.
- The brain moves information around like the heart moves blood around.
- The standard neuropsychological view: Most, if not all, subjective, immaterial states of mind have a 1:1 correspondence with objective, material states of brain.
- The mind is what the brain does.
- Representations in mind are incomplete and inaccurate — especially from a wounded brain.
Integration of Mind and Brain

- As your mind changes, your brain changes both temporarily and permanently.
  
  “Neurons that fire together, wire together.”

- As your brain changes, your mind changes.

- You can use your mind to change your brain to benefit your whole being - and everyone else whose life you touch.
“Ardent, Resolute, Diligent, and Mindful"
Natural State of Your Brain

- Awake
- Parasympathetic nervous system activation
  - Pleasant, rewarding hormones and neurotransmitters:
    - Norepinephrine, oxytocin, dopamine, endorphins
- Openness to others
- Large-scale coherence of billions of neurons firing together in resonant harmony
Sam sees “peeping among the cloud-wrack a white star twinkle for a while.
The beauty of it smote his heart, as he looked up out of the forsaken land, and hope returned to him.

For like a shaft, clear and cold, the thought pierced him that in the end the Shadow was only a small and passing thing: there was light and high beauty for ever beyond its reach.”

Tolkien, The Lord of the Rings
Be wisdom itself, rather than a person who isn't wise trying to become wise.

Trust in awareness, in being awake, rather than in transient and unstable conditions.

Ajahn Sumedho
Neuropsychology of Suffering

- Life requires many systems with many parts.
- Systems in body, brain, relationships, planet.
- All need to maintain healthy balance: dynamic, “within-range,” around a set-point.
- Since environments are always changing (impermanent), we are continually imbalanced, thus receiving First Darts; to live is to suffer.
- Wounds to the brain are imbalances in the brain, a very intimate suffering.
Community of the Wounded

Is it given to anyone to:

- Avoid disease?
- Avoid old age?
- Avoid death?
- Avoid being separated ultimately, one with another, from everything they love?
- Avoid inheriting the consequences of the actions?
Neuropsychology of Second Dart

- Feeling tone: pleasant, unpleasant, neutral
  - Approach/avoid/ignore (greed/hatred/delusion)
  - Amygdala and hippocampus
- Pleasant/unpleasant: SNS, stress hormones
- Pleasure circuits (e.g., dopamine, oxytocin, reward success)
- Frontal lobe comments, conclusions, views

Very effective for survival - but Mother Nature
Second Dart Suffering

- The stress response feels . . . stressful.
- In the body, chronic stress responses:
  - Weaken immune and cardiovascular systems
  - Disturb gastrointestinal and hormone systems
  - Lower mood, oversensitize brain to negative
- In the mind, second darts “disturb the peace”
- In relationships, they lead to over-reactions which often become self-fulfilling.
Know the mind.

Shape the mind.

Free the mind.
Breaking the Chain

- The power of insight
- Equanimitity:
  - Not reacting to our reactions
  - The Brahmavihara that is the foundation of kindness for others: compassion, kindness, and joy
Monks, when the uninstructed worldling experiences a painful feeling, he sorrows, grieves, and laments; he weeps beating his breast and becomes distraught. He feels two feelings - a bodily one and a mental one.

Suppose they were to strike a man with a dart, and then strike him immediately afterward with a second dart, so that the man would feel a feeling caused by two darts.

So too, when the uninstructed worldling experiences a painful feeling, he feels two feelings - a bodily one and a mental one.
In the deepest forms of insight, we see that things change so quickly that we can’t hold onto anything, and eventually the mind lets go of clinging.

Letting go brings equanimity. The greater the letting go, the deeper the equanimity.

In Buddhist practice, we work to expand the range of life experiences in which we are free.

Death
Suffering Our Wounds

We suffer helplessness.
We suffer fear.
We suffer loss of initiative, agency, personal power.
We suffer our stress responses and tension.
We suffer the loss of our self image, what no longer is.
We suffer the loss of our future, and our history.
We suffer the loss of our emotional balance.
We suffer the loss of our abilities to speak, understand, and comprehend.
We suffer feelings of dependence on others.
The Four Noble Truths

- There is suffering.
- The cause of suffering is clinging.
- Suffering ends with the end of clinging.
- The way leading to the end of clinging is the Noble Eightfold Path:
Learning from Your Own Story

- What has happened? To you and to others?
- What refuges have you found? What sanctuaries and sources of wisdom and strength?
- What have you clung to that has increased your suffering? Increased the suffering of others?
If you let go a little, you will have a little happiness.

If you let go a lot, you will have a lot of happiness.

If you let go completely, you will be completely happy.
A Serenity Prayer

May I find the serenity to accept the things that cannot be changed,
the courage to change the things which should be changed,
and the Wisdom to distinguish the one from the other.

Living one day at a time,
Enjoying one moment at a time,
Accepting hardship as a pathway to peace,
Taking this imperfect world as it is,
Not as I would have it,
Trusting in my refuges,
May I be reasonably happy in this life,
And supremely happy forever some day.

Adapted from the Serenity Prayer, by Reinhold Niebuhr (1892-1971)
Indeed, the sage who’s fully quenched
Rests at ease in every way;
No sense desire adheres to him or her
Whose fires have cooled, deprived of fuel.

All attachments have been severed,
The heart’s been led away from pain;
Tranquil, he or she rests with utmost ease
The mind has found its way to peace.
Wounds Open the Heart

- The necessity of grieving

- Compassion and lovingkindness . . . For oneself . . . For benefactors . . . For neutral people . . . For difficult people

May you be safe.
May you be healthy.
May you be happy.
Activating the Parasympathetic

- Full breaths, especially exhalation
- Deep relaxation
- Balancing heart-rate variability; HeartMath
- Mindfulness of the body
- Yawning
- Meditation
- Fiddling with the lips
Positive Emotions

- Much more than a pleasant feeling:
  - Promote energy, vigor, pep, aliveness
  - Counteract depression and anxiety
  - Support parasympathetic arousal
  - Increase resilience, and recovery from stress
  - Support strong relationships
  - Support physical health
  - Support contemplative practice

- Cultivate through meditation, Joy class, daily gratitude practices, good company, etc.
Taking in the Good

Cultivating wholesome qualities is central to psychological growth and spiritual practice.

It’s important to compensate for the hard-wired “negativity bias” of the brain.

Four steps:
- Register positive events as positive experiences.
- Savor and extend the experience.
- Sense the experience sinking into oneself.
- Imagine the current experience replacing old pain.
Chop wood

Carry water
With dewdrops dripping,
I wish somehow I could wash
this perishing world

Basho
To study the Way is to study the self.

To study the self is to forget the self.

To forget the self is
To be enlightened by all things.

Dogen
Selflessness is not a case of something that existed in the past becoming nonexistent.

Rather, this sort of “self” is something that never did exist.

What is needed is to identify as nonexistent something that always was nonexistent.
Wise Views

- All is not well, but all was not ever well before.
- I am struggling with deficits and inner demons, but I was struggling before, whether I saw them or not.
- Others are struggling with deficits and inner demons, whether I see them or not.
- The struggle is always present, but there is always this breath to attend to.
- People with obvious wounds know more fully than most others how thin the ice is for all of us.
- The truths of existence are oftentimes more clearly seen after injury than before.
No self,
no problem
Be still
Listen to the stones of the wall
Be silent, they try
To speak your Name.

Listen to the living walls.
Who are you?
Who Are you? Whose Silence are you?
All experience is

Preceded by mind, led by mind, made by mind.
Speak or act with a corrupted mind,
And suffering follows,
As the wagon wheel follows the hoof of the ox.

All experience is

Preceded by mind, led by mind, made by mind.
Speak or act with a peaceful mind,
And happiness follows,
Acceptance, Recovery, Transcendence

- Recovery has its organic rhythms.
- Acceptance and transcendence are always possible.
- Behind all wounds is radiant being.

Knowing life is short, enjoy it day after day, moment after moment.
The Long Road Ahead

- Take it easy; take it slowly.
- Be clear on what is, what you can and cannot do, and hopeful about what you can do in the future.
- Honor the Divine Messengers.
- Use forgiveness and humor.
- Cultivate love and joy.
- Draw on spiritual traditions and teachers.
Tending to the Causes

You can water the fruit tree - but you cannot get it produce apples.

An attitude that is calming - and productive.

*Do all you can, with what you have, in the time you have, in the place where you are.*

Nkosi Johnson
Wise Effort

Nurturing the causes of:

- The arising, increase, and continuance of wholesome
- The prevention, decrease, and fading away of the unwholesome
We who lived in concentration camps can remember those who walked through the huts comfortiing others, giving away their last piece of bread.

They may have been few in number, but they offer sufficient proof that everything can be taken from a person but one thing: the last of human freedoms – to choose one’s attitude in any given set of circumstances – to choose one’s own way.

Viktor Frankl, Auschwitz survivor
Taking Refuge

- A “secure base,” respite, sanctuary, solace, and support - the starting point of daily living
- In Buddhism, the Three Jewels:
  - Buddha: Siddhartha, and the capacity for wakefulness and freedom within everyone
  - Dharma: the truth and the teachings of truth
  - Sangha: community, good company of guides, and fellow travelers
- Other refuges: God, good times, feeling loved, practice, awareness, insight, etc.
Penetrative insight

joined with calm abiding

utterly eradicates

afflicted states.

Shantideva
Honoring Our Caregivers

- Issues with giving and receiving care: guilt, exhaustion, fear, dependence, etc.
- Empathy, cooperation are deep in our nature. We all need to give and get care.
- Helping others to help us
- Helping others enable us to help them
- Caring for ourselves as the foundation of caring for others; courage and regeneration
- Virtue - sila as the basis of healthy
Wisdom and Virtue

Wisdom is . . . all about understanding the underlying spacious and empty quality of the person and of all experienced phenomena.

To attain this quality of deep insight, we must have a mind that is quiet and malleable.

Achieving such a state of mind requires that we first develop the ability to regulate our body and speech so as to cause no conflict.

Venerable Tenzin Palmo
Neurologic Conditions Affecting Meditation

1) Language problems in expressing, understanding, reading, and writing
2) Nonverbal problems in neglect, lack of the whole picture (gestalt), localization in space, recognition of emotions
3) Problems in memory, including short-term and long-term recall, whether progressive or not
4) Problems in motor action and coordination
5) Problems in sensation
6) Problems in autonomic regulation
7) Changes in emotional balance and stability
Adapting Contemplative Practice

- Individualize
- Compassion
- Discipline
- Community

Adapt Goals and Practices
Outstanding behavior, blameless action, open hands to all, and selfless giving:

This is a blessing supreme.

The Buddha
